

## Universal Finishing Interface

HP Indigo's Universal Finishing Interface (UFI) is an open interface system enabling finishing vendors to easily integrate their equipment inline or near-line to HP Indigo presses

In addition, in cooperation with HP Indigo, Lasermix Roll Systems developed the FinishReady™ Controller that facilitates automatic setup, control, and monitoring of concatenated finishing lines enabling:

- Automatic setup of the finishing devices via a single JDF ticket
- Management of the job run
- Reporting on failed sheets, copies or records, and job status

## PageReady system

Integrated, high-performance solution for automated cutting, trimming, collating, stacking, and feeding for the sheetfed HP Indigo 7500 Digital Press and HP Indigo 7000 Digital Press with the following features:

- Cutting and stacking multiple-up flats ready for customer delivery or book blocks for post press binding
- Single sheet or blocks flow to inline binding solutions
- Automated setup in seconds via JDF workflow with no make-ready waste
- Developed to meet HP specifications by Lasermix Roll Systems
- Allowing:
  - Lower production costs
  - Faster turnaround times
  - Better document integrity assurance

## Modular Finishing Approach

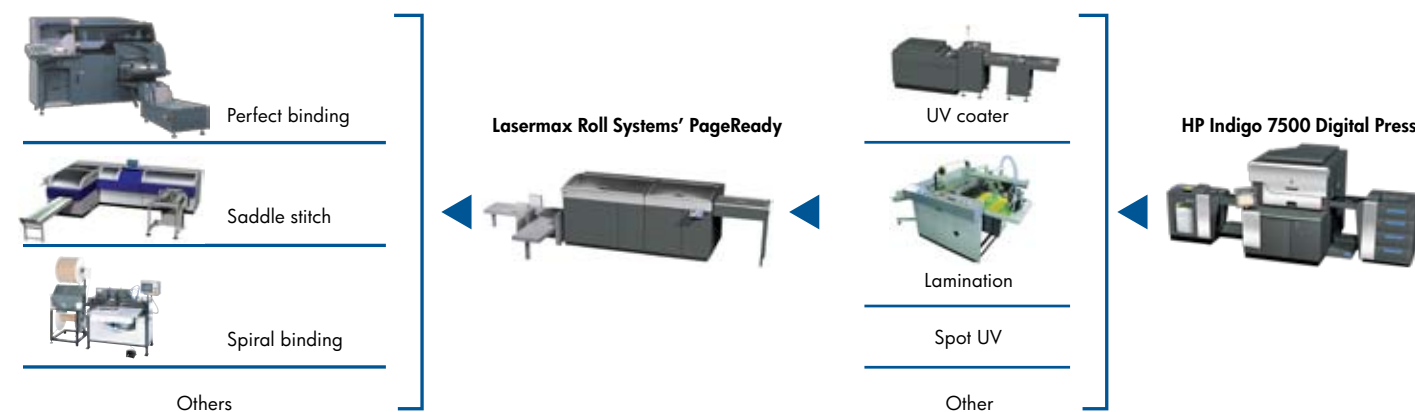

The HP Indigo revolutionary approach to finishing integration allows for full modularity.

PageReady™ system is the pivotal inline mechanical interface for the HP Indigo 7500 Digital Press and HP Indigo 7000 Digital Press to connect to both upstream finishing devices and downstream binding systems.

The modular design allows the flexibility to integrate inline finishing and binding solutions in a variety of configurations, serving a wide range of applications such as:

- Flat documents: postcards, invitations, greeting cards, photo cards, and collateral
- Multipage documents: books, photo albums, manuals, booklets, and calendars

This breakthrough approach can be customised per customer needs.

## Intelligent Automated Finishing

HP Indigo is leading the way to relieve the bottlenecks in post press production by introducing revolutionary, versatile automated inline and near-line solutions, enabling you to:

- Introduce end-to-end automated workflow from job submission to job completion
- Reduce production costs and provide faster turnaround times
- Ensure document integrity throughout the production process
- Leverage a wide portfolio of finishing partners, offering state of the art automated near-line and inline finishing solutions
- Lower barriers to entry for new customers and markets
- Assist our customers in developing new applications
