

Steve Tramack

Senior Engineering Manager, Alliances, Performance and Solutions Engineering, HP Enterprise Business
Hewlett-Packard Company

Steve Tramack is a senior engineering manager in the Alliances, Performance and Solutions Engineering organization within the Enterprise Server, Storage and Networking division at HP. He is responsible for Microsoft solution development activities.

Tramack manages the team responsible for the development of the Infrastructure-to-Applications Converged Application solutions for SQL Server, focusing on data warehousing, business intelligence, database consolidation and OLTP appliances and reference architectures. Tramack's team also focuses on Microsoft SQL Server, SharePoint and Windows infrastructure (including Hyper-V) solutions, developing performance and best practices collateral. His team produces application characterization and solution integration documents, presentations and demonstrations, and it has developed the sizing and configuration tools for a number of Microsoft applications.

A 15-year HP employee with more than 26 years of industry experience, Tramack wrote HP's Performance and Configuration guide for Exchange and is a frequent featured speaker at Microsoft and HP conferences, including Microsoft TechEd, HP Tech Forum and HP's Microsoft Exchange Academies.
