Robert Taylor

Vice President, Data Center Services, Enterprise Services
Hewlett-Packard Company

Robert Taylor is vice president of Data Center Services at HP Enterprise Services. The Data Center Services organization creates, designs and deploys data center services that deliver superior value for clients. Taylor drives best-in-class data center models and develops the next generation of standardized low-cost, high-value offerings.

Prior to this role, Taylor was U.S. Midwest leader responsible for the delivery of Infrastructure and Business Process Services for EDS.

Taylor is a veteran in service delivery management. Prior to assuming responsibility for the Midwest region, he was client delivery executive on several large accounts. His responsibilities included the delivery of midrange, desktop, help desk, network, application development and other services to clients. He was instrumental in increasing client satisfaction and ensuring service excellence.

Before his career with EDS, Taylor implemented a data analysis application as part of General Motors' Cooperative Education Program. Taylor also has developed industry expertise in both the financial services and manufacturing industries through his varied work experiences.

Taylor has a B.S. degree in computer science from the University of Missouri.
